

Painting Guide

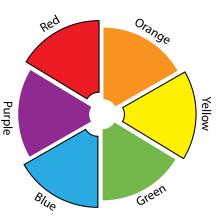

Face Painting Hints and Tips

For best results when using the face paint simply mix in a small amount of water. The more water you add, the less intense the colour will be. The face paint is fast drying and simply washes off with water. Use the sponge to add a base colour or for a quicker application. Use the crayons to add detail and line work.

If your design has both light and dark colours, always apply the light colours first. When using your brush make sure your brush strokes are even and continuous.

Keep your designs as simple as possible, as children often do not want to sit still for long. Take care when painting around the eyes and do not paint too close to the eye. Try this paint for body painting.
